

**Algorithmic Governance, Urban Space,
and Domicide:
A Systematic Literature Review of the
Dual-Use Nature of
Urban Data Technologies, 1990-2025**

Elias Vasnic

MSc Public Policy & Management

University of Glasgow

August 2026

Supervised by: Craig

Abstract

[TODO: Write abstract after all chapters are drafted.]

Acknowledgements

[TODO]

Contents

List of Figures

Chapter 1

Introduction: The Algorithm and the City

[TODO: Write introduction. Target 1,500 words. Source: revised formative draft cut 40%, add bridge paragraph and provisional policy landing zone.]

Chapter 2

Theoretical Framework

[TODO: Write theoretical framework. Target 2,500 words. Sources: Arrow (1962); Deleuze / De Landa; Michael (2007); King (2004); Graham (2006); Weizman (2007). Organise around one primary axis: disciplinary → control.]

2.1 The Information Good and Dual-Use Fluidity

[TODO]

2.2 Epistemic Authority and Black-Boxing

[TODO]

2.3 The Machinic City and Modulation

[TODO]

2.4 Spatial Collapse and Home Unmaking

[TODO]

Chapter 3

Methodology

[TODO: Write methodology. Target 2,500 words. Source: revised formative draft shift to past tense, insert real PRISMA numbers, and narrative from SLR.log.md.]

3.1 Research Design and Rationale

[TODO: Modified PRISMA 2020 SLR; justification for systematic review design given the dual-use research question.]

3.2 Search Strategy

[TODO: Two-search strategy (A: high-recall civil-military nexus; B: high-precision spatial destruction). Date window 1990–2025. Scopus + WoS. Calibration narrative from SLR.log.md.]

3.3 Snowballing

[TODO: Single-iteration backward + forward citation chaining from 3–5 anchors (provisionally Graham 2006, Kitchin 2014, Weizman 2007); Wohlin (2014) citation.]

3.4 Grey Literature

[TODO: Overton (trial-capped) + Policy Commons; AACODS appraisal.]

3.5 Screening and Inclusion/Exclusion Criteria

[TODO: Two-pass screening (title/abstract → full text); inclusion/exclusion criteria; decision journal for borderline cases.]

3.6 Data Extraction and Synthesis

[TODO: Systematic Review Map; thematic extraction along conceptual axes.]

3.7 Limitations

[TODO: Four acknowledged limitations language, single-reviewer, grey-lit unevenness, Overton trial cap.]

Chapter 4

Findings: The Systematic Map

[TODO: Write findings. Target 3,500 words. Output of SLR extraction. PRISMA flow diagram with real n's. Descriptive statistics (counts by theme $\times$ year). Longitudinal claims from the Review Map.]

Chapter 5

Discussion

[TODO: Write discussion. Target 2,250 words. Findings $\times$ theoretical framework.
A/B convergence-gap finding; policy implications. Link back to dual-use thesis.]

Chapter 6

Conclusion and Research Agenda

[TODO: Write conclusion. Target 1,250 words. Summary of findings; policy recommendations; agenda for future research; limitations restated.]

Appendix A

AI-Use Statement

[TODO: Statement of AI use in accordance with University of Glasgow guidelines. Describe which tools were used (e.g. **opencode** agents) and for what purposes (drafting, editing, verification, formatting). All agent-assisted text reviewed and revised by the author.]
